                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABR62933) of the invention, which are therefore expected to be involved in cancer and cell growth regulation. PIM-3 is also involved in the development of insulin resistance and type 2 diabetes mellitus. The invention relates to the use of PIM-3 nucleic acids and proteins in: screening assays for compounds that modulate insulin resistance or type diabetes mellitus; detection assays for detecting insulin resistance or type 2 diabetes mellitus (e.g. chromosomal mapping, tissue typing, forensic biology); predictive meedicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, pharmacogenomics); and for the preparing a medicament for the treatment of insulin resistance or type 2 diagnostic or prognostic assays.
                                                                                                                                                                                                                                                                        30-JAN-2004; 2004DE-10004894
                                                                                                                                                                                                                     30-JAN-2004; 2004DE-10004894

Identifying substances that regulate PIM kinases, useful for treatment and diagnosis of urinary incontinence and the urge to urinate, and similar use of PIM proteins or nucleic acids.
```

Claim ۲. 10; 37pp;

regulate urinary incontinence and the urge to urinate. The method comprises incubating a test compound with a cell and/or cell preparation that has synthesized a specific protein of the PIM (proviral integration site) kinase family and measuring either binding of the test compound to the PIM kinase, or a functional parameter that is altered by the binding. The method of the invention demonstrates uropathic and gene therapy applications and may be useful for treatment and diagnosis of urinary incontinence and the urge to urinate. The method is based upon regulating the activity or expression of PIM kinases that are involved in bladder control. The current sequence is that of the Norway rat PIM-1 serinethreonine kinase protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the protein sequence of human Pim1, a protein related to tyrosine threonine kinase (TTK, see ABP54938). TTK polynucleotides and polypeptides of the invention encompass polynucleotides and polypeptides for the invention encompass polynucleotides and polypeptides having sequence similarity or sequence identity to human TTK and other genes and gene products related to TTK, such as Pim1. The invention is based on the finding that TTK is differentially expressed in various forms of cancer. It provides methods for the identification of cancerous cells, especially breast cancer and colon cancer cells, by detection of expression levels of TTK, as well as diagnostic, prognostic and therapeutic methods. These methods can be used as the basis of rational therapy. Assays for identifying molecules that modulate the activity of these genes in cancers, as well as methods of inhibiting tumour growth by inhibiting the activity of TTK are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   abnormal expression levels a prostate and ovarian cancer.

The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method is useful for modulating the level or activity of HKID-1 polypeptide or polynucleotide in a subject having or predisposed to having a disorder involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoietic neoplastic disorders e.g. Acute promyeloid leukaemia (APMI), Chronic myelogenous leukaemia (CML) and Waldenstrom's macroglobulinaemia (WM). This is the amino acid sequence of a human protein kinase phosphorylation site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulating levels or activity of HKID-1 polypeptides, a member of serine/threonine kinase superfamily, for treating cancer, by contacting cell expressing the polypeptide with a modulator of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  differentiative disorder; cancer; Acute promyeloid leukaemia; APML; Waldenstrom's macroglobulinaemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method of identifying pain-regulating compounds, involving screening candidate compounds for interaction with PIM1 or PIM3 kinase. PIM1 and PIM3 proteins and coding sequences are useful for treating chronic pain, particularly of neuropathic or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Method for identifying analgesics, useful particularly for treating chronic pain, by screening compounds for interaction with PIM-1 or kinase, or related compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-MAY-2001; 2001DE-01023055
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 13-MAY-2002; 2002WO-EP005234.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-NOV-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO200293173-A2

with an amount of an agent effective to reduce TTK polypeptide activity of growth of a cancerous cell (comprising: (i) detecting the activity of a cylpeptide in the presence of a candidate agent (ii) comparing the activity of a cylpeptide in the presence of a candidate agent (ii) comparing the activity of TTK polypeptide in the presence of a candidate agent (ii) comparing the activity of TTK polypeptide activity in the absence of the candidate agent; and (ii) comparing the activity to TTK polypeptide activity in the absence of the candidate agent; and (ii) comparing the contacting a cancerous cell displaying elevated expression of a TTK-contacting polymucleotide with a candidate agent; and (ii) determining the prognosis of a cancerous disease other than ovarian cancer in a control non-concer (comprising: (i) detecting expression of TTK polypeptide activity) and assessing the prognosis of a cancerous disease other than ovarian cancer in a control non-cancer cell, where the level of expression of TTK in the test cancer cell with a level of expression of the polymucleotide in the test cancer cell with a level of expression of the polymucleotide in a control non-cancer cell is condicative to the level of expression in the control non-cancer cell is condicative of the prognosis of the cancerous disease). The methods are custoff of a cancerous disease other than cancer that cancer cell, identifying a candidate agent that reduces TTK condicativity and assessing the prognosis of a cancerous disease other than cancer. The methods are also useful for determining the ability of a subject to respond to a particular therapy e.g. as a basis of control not one of the cancerous activity and assessing the ability of a subject to respond to a particular therapy e.g. as a basis of control not of the cancerous activity and assessing the ability of a cancer to the present sequence represents a closely related to pretein to human TTK. In this case human TMM and the defined)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        threonine kinase (TTK, a mitotic checkpoint gene) polypeptide or polynucleotide in a test cell obtained from the subject and in a normal non-cancer cell, where an increase in the expression level of TTK protein or nucleic acid in the test cell compared to that in the normal cell, indicates the presence of cancer other than ovarian cancer. Also included are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell are reducing growth of a cancerous cell are reducing growth of a cancerous cell (by contacting a cancerous cell are reducing growth of a cancerous cell are reducing growth or a cancerous cell are reducing growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
The present sequence is the protein sequence of the human serine/threonine protein kinase and prote-oncogene, PIM-1. PIM-1 proteins are the paralogues of novel human and murine PIM-3 proteins (see ABR62932 and ABR62933) of the invention, which are therefore expected to be involved in cancer and cell growth regulation. PIM-3 is also involved in the development of insulin resistance and type 2 diabetes mellitus. The invention relates to the use of PIM-3 nucleic acids and proteins in: screening assays for compounds that modulate insulin resistance or type 2
                                                                                                                                                                                                                                                                               New human or murine PIM-3 DNAs or polypeptides, useful for agent for identifying anti-type 2 diabetes mellitus drugs, treating insulin resistance or type 2 diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19-JAN-2002; 2002EP-00001401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human serine/threonine

The polynucleotide or the compound that cCC modulates or their antibodies. The polynucleotide or the compound that cCC modulates or their antibodies. The polynucleotide or the compound that cCC modulates or their antibodies. The polynucleotide or the constriction compains a medicament for treating pain (e.g. spinal segmental nerve injury (CNnng), chronic constriction confury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene CC therapy). The sequence presented is a human protein (shown in Table 2 of the specification, which is differentially expressed during pain. Note: CC flowing controlled on the printed confusion in the printed confusio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method for identifying a ligand (I), which binds to an inactive conformation of target protein kinase (T). The method involves contacting inactive conformation of (T), which contains or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bonding to the reactive group thus forming a kinase-(L) conjugate (C). The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying ligand binding to inactive conformation of target protein kinase (T) comprises contacting the conformation modified (T) which contains reactive group at binding site, with ligands and detecting kinase-ligand conjugate formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 313 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; protein kinase; enzyme; inhibitor; PIM1

The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain Barre syndrome and chronic inflammatory demyelinating polypeptide of the polyneuropathy. This sequence represents a human PRO polypeptide of the

                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TNF receptors, G-protein coupled receptors, methyl transferases, ligase, etc. The present sequence is the human PIM 1 protein. This sequence is used to illustrate the method of invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Designing a ligand binding to a target molecule, comprises identifying molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesizing ligand.

The method involves the use of a serine/threonine kinase Pim-1, its partial peptide or its salt. Also disclosed is a kit for carrying out the method of the invention. The method is useful for screening a prophylactic-therapeutic agent for cancer. The method is also useful for prophylactis and/or treatment of cancer, inducing apoptosis, treating a patient having a solid tumour that is resistant to an anticancer agent (induced by hypoxia), and for screening a substance that promotes or inhibits the activity of serine/threonine kinase Pim-1. The present sequence represents a human polypeptide relating to the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 313 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 enhancer of anticancer agent, comprises use of serine/threonine kinase Pim-1, its partial peptide or its salt.

A;Gene: Pim-2
A;Map position: X
A;Start codon: CTG
A;Note: locus between A-raf and Act-7, near Kv4.1
C;Function:
A;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonir
C;Superfamily: kinase-related transforming protein; protein kinase homology
C;Keywords: alternative initiators; ATP; autophosphorylation; phosphoprotein; phosphotra
F;99-345/Domain: protein kinase homology <KIN>
F;99-105/Region: protein kinase ATP-binding motif
F;120/Active site: Lys #status predicted
submitted to the EMBL Data A; Reference number: Z19538 A; Accession: T2255 A; Status: preliminary; tran A; Molecule type: DNA
                                                                                         hypothetical protein F45H7.4 - Caenorha C;Species: Caenorhabditis elegans C;Date: 15-Oct-1999 #sequence_revision C;Accession: T22255 #S.Percy, C.

probable serine/threonine protein kinase (EC 2.7.1.-) - yeast (Saccharomyces cerevisiae)
N;Alternate names: protein YAL002; protein YAL017w; secretory protein SSP138
C;Species: Saccharomyces cerevisiae
C;Date: 30-Sep-1993 #sequence revision 02-Aug-1994 #text_change 05-Oct-2004
C;Accession: S33653; S36717; S36732; JH0486
R;Clark, M.W.; Zhong, W.W.; Keng, T.; Storms, R.K.; Ouellette, B.F.F.; Barton, A.; Kabac
Yeast 9, 543-549, 1993
A;Title: The YAL017 gene on the left arm of chromosome I of Saccharomyces cerevisiae enc
A;Reference number: S33653; MUID:93311122; PMID:8322517

A;Introns: 64/1; 125/3; 186/3; 230/3; 292/3; 322/3; 350/3; 396/3; 475/3
C;Function:
A;Description: Catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonir C;Superfamily: SNF1-related protein kinase; protein kinase homology
C;Keywords: ATP; magnesium; phosphotransferase; serine/threonine-specific protein kinase F;17-271/Domain: protein kinase homology <KIN>
F;25-33/Region: protein kinase ATP-binding motif
F;48,67,142,44/Active site: Lys, Glu, Asp, Lys #status predicted
F;147,151/Binding site: magnesium (Asn, Asp) #status predicted

Bichmann A., Yuan L., Breant C., Alitalo K., Koskinen P.J.;

"Developmental expression of Pim kinases suggests functions also outside of the hematopoietic system.";

Oncogene 19:1215-1224(2000).

-i- CAPALYTIC ACTIVITY; ATP + a protein = ADP + a phosphoprotein

-i- PTM: Autophosphorylated.

-i- SIMILARITY: Belongs to the Ser/Thr protein kinase family. PII
                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN
